DISC Archiving Systems Newsletter

February 2010

DISC present at CeBIT 2010 from 2-6 March in Hannover, Germany

From 2nd to 6th March [CeBIT 2010](#) will open its doors for visitors from all over the globe. This years 'theme is "*Connected Worlds*", describing the convergence of individual technologies and the integration of international markets.

DISC Archiving Systems will be present in the "Professional Storage Area" in hall 2, together with our business partners:

- INCOM Storage GmbH; booth H2 E40
- PoINT Software & Systems GmbH; booth H2 D40

Would you like to schedule a meeting and/or receive a free day ticket?

Send an email to marketing@disc-group.com.

BD Series now available with SAS Drive Interface

DISC is pleased to announce that our library interface is now Serial attached SCSI, SAS, interface. SAS is the successor to parallel SCSI and is being provided as standard on most servers.

All DISC Series libraries will have this SAS interface and DISC has published a technical document explaining the changes and how this will affect the installation and configuration of the system. Please contact your DISC representative for a copy of this document.

In practice this means using a SAS HBA (Host Bus Adapter) rather than a parallel SCSI HBA. DISC has already confirmed that this works with the major ISV software providers, but please [contact us](#) if you have a specific concerns or questions.

We have recently changed our contact details and they are as follows:
