Solution Brief

XProtect®
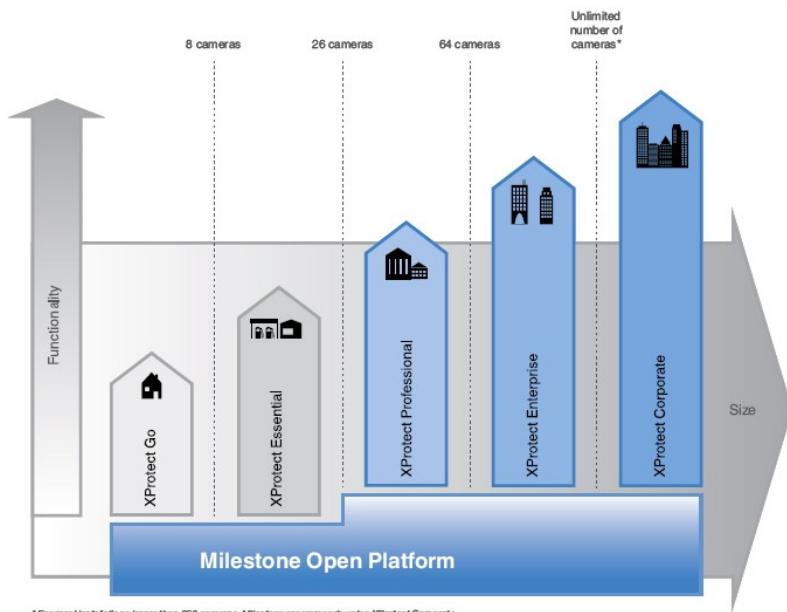

milestone
The Open Platform Company

Milestone *XProtect* Active Archive

Overview

Milestone Systems is the world's leading provider of open platform IP video surveillance software. For more than a decade, Milestone has been leading the way in providing easy-to-use, yet powerful video management software (VMS) to more than 100,000 customers worldwide. All the Milestone *XProtect* products are designed with open architecture and are compatible with more IP cameras, encoders and digital video recorders than any other manufacturer. Because Milestone provides a truly open platform, you have the ability to integrate with today's best analytics and business solutions and to expand what is possible with future innovations.

Continually setting the standard in IP video management, *XProtect* products are:

- Open: Providing the widest choice for integration with computer hardware, video analytics and other third-party applications
- Easy to use: Featuring automatic device discovery, camera configuration wizards, user-friendly video search tools and an intuitive client application
- Future proof: All *XProtect* products easily scale to grow according to your needs to maximize the return on your investment *XProtect* products have a wide array of impressive features to cover all your surveillance needs. Whether your installation is just a few cameras or several thousand, discover why *XProtect* is your best option for today and tomorrow.

- Reliable proven technology > Over 50,000 installations worldwide
- Scalable to meet future growth > Simple upgrade path
- Hardware independence > Supports over 900 cameras, 75 manufacturers
- Open architecture for integration > Best of breed API
- Live view and control view remote access > Anywhere, anytime remote management to both live and pre-recorded video
- Optional seamless archival storage capabilities to BD/CD/DVD media
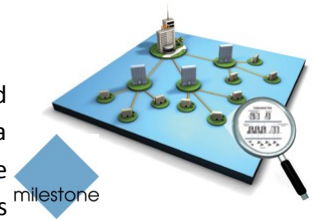

DISC BD Series
### The future of archiving today..
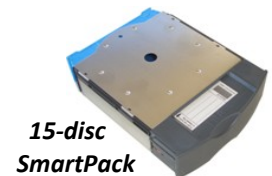

DISC *XProtect ACTIVE ARCHIVE*

Overview

The DISC BD/BDXL series optical libraries provide for centralized automated write-once storage and retrieval of Milestone **XProtect** video content and data. Providing 100% seamless integration as a standard Windows CIFS mapped drive share, the DISC BD/BDXL-series optical libraries are an ideal choice for evidentiary CoC and EDRM compliant long-term storage requirements. Each DISC BD/BDXL-series library can either be rack-mounted or free-standing and is available in a variety of capacity and frame sizes to meet your unique storage needs. A dedicated 2U network-attached storage (NAS) server provides seamless network connectivity to all **XProtect** clients over a GigE LAN with no local client agents required. Each BD/DVD disc generated by the DISC archival system is UDF-compliant and can be read on any Linux, MAC, Unix or Windows client without requiring any specialized software. Each DISC BD/BDXL-series library comes integrated with your choice of 50GB or 100GB BDXL automation-ready Blu-ray drives. Simultaneous BD/CD/DVD mixed media is also supported to meet any data set requirement. Each library also includes patented removable hot-swappable 15-disc *SmartPack* technology that provide quick bulk media import/export while enabling robust bare media security for off-line media handling and data management.

Features

- Long-term 50+ year archival write-once media
- Green storage technology providing the lowest lpower consumption available
  (<25BTU/hour and 8watts/TB)
- Meets CoC, DoD 5015.2, EDRM, FRE, IALEIA, NIST, OLES, VLER (virtual lifetime electronic record) compliance requirements
- Provides data interchange of BD archive media to any Linux, MAC, Unix, Windows operating system client without any 3rd. party software to read the UDF media
- Downward compatible and simultaneous on-line access and support of all BD/CD/DVD media within the same library

- Seamless integration to any **XProtect** application, server and network via industry standard CIFS/NFS protocols as a standard share/mapped drive/mount point and compatible with native operating system ACL's/security
- Flexible media and library partitioning, file spanning, optional Real-time mirroring and policy-based tiered data migration
- Provides ability to access on-line, near-line and off-line data to meet time-to-data compliance requirements
- *SmartPack* media management offering hot-swappable media exchange and secure handling of removed media
- Available thru DISC Archiving OEM's and Resellers worldwide
- On-site Warranty and Support available worldwide
